Part I Linear parameter-varying systems

| | | |
|----------|---|----|
| 1 | Introduction to LPV systems | 2 |
| 1.1 | System definition | 2 |
| 1.2 | Types of parameters | 4 |
| 1.2.1 | Approximating nonlinear systems: quasi-LPV systems | 4 |
| 1.2.2 | Embedding time-varying components: intrinsic parameters | 6 |
| 1.2.3 | Artificial/extrinsic parameters | 7 |
| 1.3 | Representation of LPV Systems | 8 |
| 1.3.1 | Generic LPV systems | 9 |
| 1.3.2 | Polytopic LPV systems | 10 |
| 1.3.3 | LPV systems in LFT-form | 14 |
| 1.3.4 | LPV systems in input/output form | 16 |
| 1.4 | Examples | 17 |
| 1.4.1 | Inverted pendulum - robust control and performance | 18 |
| 1.4.2 | LPV model for a web service system | 19 |
| 1.4.3 | LPV models for aperiodic sampled-data systems | 21 |
| 1.4.4 | Automotive suspension system | 22 |
| 1.4.5 | A wide range of applications | 23 |
| 1.5 | Control, observation and filtering of LPV systems | 24 |
| 1.5.1 | Observation and filtering of LPV systems | 25 |
| 1.5.2 | Control of LPV systems | 26 |
| 2 | Stability of LPV systems | 29 |
| 2.1 | Chapter outline | 29 |
| 2.2 | General notions of stability for dynamical systems | 30 |
| 2.2.1 | General stability and instability results | 31 |
| 2.2.2 | The LTI system case | 33 |
| 2.3 | Stability notions for LPV and uncertain systems | 35 |
| 2.3.1 | Quadratic stability | 36 |

| | | |
|----------|--|-----------|
| 2.3.2 | Robust stability | 38 |
| 2.3.3 | Stability with brief instabilities | 40 |
| 2.3.4 | Other types of Lyapunov functions | 40 |
| 2.4 | Stability of generic LPV systems | 42 |
| 2.4.1 | Quadratic stability | 42 |
| 2.4.2 | Robust stability | 46 |
| 2.5 | Stability of polytopic LPV systems | 47 |
| 2.5.1 | Quadratic stability | 47 |
| 2.5.2 | Robust stability | 48 |
| 2.6 | Stability of LPV systems in LFT-form | 53 |
| 2.6.1 | L_2 -norm and H_∞ -norm | 54 |
| 2.6.2 | Small-gain theorem | 56 |
| 2.6.3 | Constant D -scalings & the scaled-small gain theorem | 59 |
| 2.6.4 | Frequency-dependent D -scalings | 61 |
| 2.6.5 | Full-block S -procedure | 63 |
| 2.6.6 | Topological and quadratic separation | 66 |
| 2.6.7 | Integral quadratic constraints analysis | 74 |
| 3 | Control of LPV systems | 79 |
| 3.1 | Gain-scheduling - the LPV way | 79 |
| 3.2 | Types of controllers | 81 |
| 3.3 | General parameter dependent systems | 82 |
| 3.3.1 | Quadratic stabilization by state-feedback | 83 |
| 3.3.2 | Quadratic stabilization by dynamic-output feedback | 86 |
| 3.3.3 | Robust stabilization by state-feedback | 89 |
| 3.3.4 | Robust stabilization by dynamic-output feedback | 90 |
| 3.4 | Polytopic LPV systems | 92 |
| 3.4.1 | Quadratic stabilization by state-feedback | 92 |
| 3.4.2 | Robust stabilization by state-feedback | 93 |
| 3.5 | LPV systems in LFT-form | 94 |
| 3.5.1 | Quadratic stabilization by state-feedback | 96 |
| 3.5.2 | Quadratic stabilization by dynamic output-feedback | 100 |

Part II Time-Delay Systems

| | | |
|----------|---|-----|
| 4 | Introduction to time-delay systems | 104 |
| 4.1 | Representation of time-delay systems | 104 |
| 4.1.1 | Functional differential equations | 104 |
| 4.1.2 | Differential equation with coefficients in a ring of operators | 105 |
| 4.1.3 | Abstract representation over an infinite dimensional linear space | 105 |
| 4.2 | Bestiary of time-delay systems and delays | 106 |
| 4.2.1 | Types of time-delay systems | 106 |
| 4.2.2 | Families of delays | 110 |
| 4.3 | Examples | 111 |
| 4.3.1 | Delays in biological reaction networks | 112 |
| 4.3.2 | Aperiodic sampled-data systems | 114 |
| 4.3.3 | Delay-SIR model | 117 |
| 4.3.4 | Neutral Pearl-Verhulst equation and ecology | 120 |
| 4.3.5 | Networks and congestion control modeling | 122 |
| 4.4 | Control, observation and filtering of time-delay systems | 130 |
| 4.4.1 | Observation and filtering | 130 |
| 4.4.2 | Control | 132 |
| 5 | Stability analysis of time-delay systems | 136 |
| 5.1 | Chapter outline | 136 |
| 5.2 | General notions of stability for time-delay systems | 137 |
| 5.2.1 | Definitions | 137 |
| 5.2.2 | General stability and instability results | 138 |
| 5.2.3 | LTI system case | 143 |
| 5.3 | Delay-related notions of stability | 145 |
| 5.3.1 | Delay-independent stability | 145 |
| 5.3.2 | Delay-dependent and delay-range stability | 146 |
| 5.3.3 | Time-varying delays and the quenching phenomenon | 148 |
| 5.4 | Model transformations, comparison systems and additional dynamics | 149 |
| 5.4.1 | Newton-Leibniz model transformation | 149 |
| 5.4.2 | Parametrized Newton-Leibniz model transformation | 151 |
| 5.4.3 | Descriptor model transformation | 152 |
| 5.4.4 | Other model transformations | 153 |
| 5.5 | Lyapunov-Razumikhin stability results | 153 |
| 5.5.1 | Delay-independent stability | 153 |
| 5.5.2 | Delay-dependent stability | 155 |
| 5.6 | Lyapunov-Krasovskii stability results | 156 |
| 5.6.1 | Delay-independent stability | 157 |

| | | |
|--------|--|-----|
| 5.6.2 | Delay-dependent stability - Newton-Leibniz model transformation | 160 |
| 5.6.3 | Delay-dependent stability - Parametrized Newton-Leibniz model transformation | 161 |
| 5.6.4 | Delay-dependent stability - Park's inequality | 163 |
| 5.6.5 | Delay-dependent stability - descriptor model transformation | 168 |
| 5.6.6 | Delay-dependent stability - method of free-weighting matrices | 170 |
| 5.6.7 | Delay-dependent stability - Jensen's inequality | 172 |
| 5.6.8 | Fragmented Lyapunov-Krasovskii functional | 178 |
| 5.6.9 | Delay-dependent stability - Wirtinger's inequality | 179 |
| 5.7 | L_2 -Scaled small-gain theorem based results | 182 |
| 5.7.1 | Delay operators | 183 |
| 5.7.2 | Delay-independent stability | 186 |
| 5.7.3 | Delay-dependent stability | 187 |
| 5.7.4 | Final remarks | 188 |
| 5.8 | L_∞ -Scaled small-gain theorem based results | 188 |
| 5.8.1 | *-Bounded real lemma and Scaled small *-gain theorem | 189 |
| 5.8.2 | Norms of delay-operators | 191 |
| 5.8.3 | Delay-independent stability | 192 |
| 5.8.4 | Delay-dependent stability | 193 |
| 5.9 | Integral quadratic constraints | 195 |
| 5.9.1 | Delay-independent stability | 195 |
| 5.9.2 | Delay-dependent stability | 196 |
| 5.10 | Quadratic separation | 198 |
| 5.10.1 | Preliminary results | 198 |
| 5.10.2 | Delay-independent stability | 199 |
| 5.10.3 | Delay-dependent stability | 200 |

Part III Linear parameter-varying time-delay systems

| | | |
|----------|--|------------|
| 6 | Introduction to LPV time-delay systems | 204 |
| 6.1 | Representation of LPV time-delay systems | 204 |
| 6.2 | Examples | 206 |
| 6.2.1 | Milling process | 206 |
| 6.2.2 | LPV control of a system with input delay | 207 |
| 6.2.3 | Approximation of state-dependent delay systems | 209 |
| 6.2.4 | LPV model of a marine cooling system | 210 |
| 6.2.5 | Other applications | 215 |
| 6.3 | Stability results for LPV time-delay systems | 215 |

- 7 Observation and filtering of LPV time-delay systems** 220
 - 7.1 Observation of LPV time-delay systems 220
 - 7.1.1 Observer with exact memory 221
 - 7.1.2 Examples 225
 - 7.1.3 Memoryless Observer 230
 - 7.1.4 Examples 232
 - 7.2 Simple observer for LPV time-delay systems 233
 - 7.2.1 Observer with exact-memory 233
 - 7.2.2 Memoryless observer 235
 - 7.3 Filtering of LPV time-delay systems 236
 - 7.3.1 Filter with exact memory 237
 - 7.3.2 Memoryless filter 239
 - 7.3.3 Examples 239

- 8 Control of LPV time-delay systems** 243
 - 8.1 State-feedback controllers 243
 - 8.1.1 Delay-independent stabilization - generic case 244
 - 8.1.2 Delay-dependent stabilization - generic case 245
 - 8.1.3 Delay-independent stabilization - LFT case 254
 - 8.1.4 Delay-dependent stabilization - LFT case 258
 - 8.1.5 Further remarks on LFT-based approaches 261
 - 8.2 Observer-based output feedback controllers 262
 - 8.2.1 Memoryless observer-based output feedback 263
 - 8.2.2 Observer-based output feedback with exact memory .. 269
 - 8.3 Dynamic output-feedback controllers 273
 - 8.3.1 Dynamic output feedback with exact memory 273
 - 8.3.2 Memoryless dynamic output feedback 278

- A Technical results in linear algebra** 280
 - A.1 Determinant formulas 280
 - A.2 Block-matrices 281
 - A.3 Singular-values decomposition 281
 - A.4 Moore-Penrose pseudoinverse 282
 - A.5 Solving $AX = B$ 283
 - A.6 Solving $BXC + (BXC)^T + Q \prec 0$ 283

- B Linear matrix inequalities** 285
 - B.1 Preliminaries 285
 - B.2 Solving infinite-dimensional LMI problems 288
 - B.3 Solving semi-infinite LMI problems 288

- C Technical results in robust analysis, control and LMIs** 302
 - C.1 Kalman-Yakubovich-Popov Lemma 302
 - C.2 Facts on dissipativity theory 303
 - C.3 Schur complement 305

| | | |
|-------------------|-------------------------------|-----|
| C.4 | Generalized relaxation lemma | 307 |
| C.5 | Positive real lemma | 308 |
| C.6 | H_2 performance | 309 |
| C.7 | Generalized H_2 performance | 310 |
| C.8 | S -procedure | 311 |
| C.9 | Dualization Lemma | 312 |
| C.10 | Petersen's Lemma | 312 |
| C.11 | Finsler's Lemma | 318 |
| C.12 | Projection/Elimination Lemma | 320 |
| C.13 | Completion Lemma | 322 |
| C.14 | Cone complementary algorithm | 324 |
| References | | 327 |
